

Loft

- ✓ installation depth: 48 mm
- ✓ glazing thickness: 6 and 8 mm
- ✓ non-rebated door
- ✓ welded hinges, adjustable up/down
- ✓ powder coating in colours from the RAL palette

Loft is a system of internal steel doors (without a thermal break) that allows for the construction of single- and double-sash doors as well as fixed walls. It is a solution that will work well in modern interiors, especially in lofts and other spacious industrial spaces, where large glazing will provide wide access to natural light.

The effective aesthetics of the Loft door allows the use of 20 mm wide glued bars in this non-rebated system. The customer can request any technically feasible configuration, including any of the 5 sample designs. **Together with the extremely narrow profiles, this allows you to create modern-looking, dynamic arrangements.**

Loft doors have a dedicated set of fittings, handles and accessories. Please contact the sales department to check their availability.
