

Presto side-hinged garage door

- ✓ 1.5 mm steel profiles
- ✓ filling with a 40 mm sectional door panel
- ✓ polyurethane foam insulation of the panel
- ✓ steel or falling threshold
- ✓ painting profiles in colours from the RAL palette

The Presto steel side-hinged garage door is a universal solution for integral garages, detached garages and all types of utility rooms. It only requires sufficient space in front of the building for the door to operate. The door is installed in the opening (90° opening angle) or on the wall (180° opening angle), depending on the conditions and investor's preferences.

Durable and stable Presto single- and double-leaf doors comprise durable **steel profiles filled with 40-mm sectional door panels, which ensure satisfactory thermal parameters and a wide range of finishing options, including embossing and glazing.** Precise, welded hinges are responsible for the quiet, smooth operation of the doors.

The standard door accessories include a handle with a lock and insert, doorstops and a flush bolt. Optional items include glazing, and the investor can choose from over 200 colours, structural colours and veneers.
